

Aldi UK & Ireland's Energy Policy

We believe sustainability is a right not a luxury. That's why our aim is to make sustainability affordable for all our customers. One of the ways we're doing that is working to **achieve net zero emissions** in our operations by **2035**.

At Aldi, we are committed to continually improving the way we use energy. We are proud to be certified to the ISO 50001 energy management system standard which keeps us working to the best level we can.

All our colleagues are encouraged to do their bit by taking action to be energy efficient. Being as efficient as possible with energy is aligned with our core Aldi values and puts sustainability at the heart of everything we do.

Energy is a part of everyone's role at Aldi whether it's directly or indirectly and we all can make a positive contribution to managing our energy use and support us to achieve our energy targets.

How we USE energy

Refrigeration

Diesel

Lighting

Heating

Electrical Appliances

How we SAVE energy

- Certified to ISO 50001 energy management system standard.
- Getting all of **#TeamALDI** to do their part.
- Investing in technologies such as:
 - Solar Panels
 - Fridge Doors
 - Air Source Heat Pumps
 - Low-Carbon HGV Fuels
 - Climate-Friendly Refrigerant Gases
- Researching ways to save energy and reduce carbon emissions.

Our COMMITMENTS

- Continually improving our energy performance and the way we manage energy.
- Meeting energy compliance requirements.
- Supporting the purchase of energy efficient products and services.
- Considering energy use in our specifications, activities and operations.
- Making sure all information and resources to help us meet our targets is available.
- Tracking progress against our energy targets and reviewing targets annually.
- Encouraging our colleagues to be energy efficient.
- Promoting awareness of the energy policy.

If you have any suggestions to help us improve our energy performance, please contact us via our website.
